01/24/2024	Updated document to reflect NCR Voyix branding.

About Aloha Takeout v19.3 Enhancement Release Guide

This document contains instructions on how to configure and use the enhancements implemented in Aloha Takeout® v19.3. When applicable, we include a scenario, how to configure the feature in the Back-of-House (BOH), how to use the feature in the Front-of-House (FOH), and references to other materials to fully implement the feature.

For new installations and upgrades, beginning with Aloha Takeout v15.2, you must use Aloha Suite Installer. Refer to the Aloha Suite Installer Quick Reference Guide.

Upon upgrade to certain versions of ATO, RAL fails to start Iber after an EOD or refresh. To ensure RAL continues to work properly, always upgrade RAL when upgrading ATO.

List of enhancements

ATO v19.x	ALOHAP-30603	“Requiring source and destination record for Online Ordering injection” on page 1-17

Supporting manual check-ins from the Aloha POS system

Released Version	Tracking Number	Products	Audience
ATO v19.1.4	ALOHAP-3232	Aloha Takeout, Aloha Quick Service, Aloha Table Service	Configuration Technician End User

This feature is still in development and is not yet fully functional. We will update the documentation when the feature reaches optimal functionality.

When a consumer places an online order, a check-in process occurs when they arrive at the physical location. Either the Aloha Takeout (ATO) employee manually presses the Check In button on the ATO interface or, if the consumer used a cell phone app to place the order, an electronic device, such as a beacon records their arrival. Once the check-in occurs, the consumer either merges into a drive-thru lane (beacon technology) or gets in line at the counter to pick up their food.

Some sites want manual check-ins to occur using the Aloha POS system without requiring the cashier at the counter or at the drive-thru window to access ATO, since this requires additional training on the ATO interface. Effective in Aloha Takeout v19.1.4, you can perform a manual check-in from the Aloha POS system without requiring access to ATO.

Configuring manual check-ins from the Aloha POS system

To configure manual check-ins from the Aloha POS system, you must add a custom activity button in Screen Designer to interact with the ATO application. The supported panels for which you can add the button are Floorplan, Order Entry, and Close Screen in Aloha Table Service, and a regular panel in Aloha Quick Service. The custom text to add to the custom activity button is ORDER_CHECK_IN. In addition, you must configure the requirements for how you want the search capabilities to operate.

To configure manual check-ins from the Aloha POS system:

1. With POS selected in the product panel, select **Maintenance > Screen Designer > Table Service Screen Designer** or **Quick Service Screen Designer**. The screen designer function opens in a new window.
2. Select **Work with Panels**.
3. Select **Panel > Open Panel**, select a panel of the supported **panel type**, and click **OK**.

4. Select an available **button**, or select **Panel > New Button** to create a new button. The Properties dialog box appears.

Figure 1 Custom Activity Button Function

5. Under the 'Function' group bar, select **Custom Activity** from the 'Action' drop-down list.
6. Type **ORDER_CHECK_IN** in 'Custom Text.'
7. Under the 'Appearance' group bar, change the **default text** to descriptive text, such as 'Check-In.' To display text on multiple lines, insert '\n' without spaces to create line breaks.
8. Configure the remaining **options** as you would for any other button.
9. Select **Panel > Save Panel** and exit **Screen Designer**.

To configure the requirements for checking in an ATO order from the Aloha POS system:

1. Locate and open **AlohaTakeoutOverride.xml**.
2. Navigate to the **<CheckInOptions>** section.

Figure 2 AlohaTakeoutOverride.xml

3. Type **DisplayNotificationOnAllTerminals** as the value for '<CheckInAlert>.'
4. Type the **terminal ID** for which you want to display a check-in message as the value for '<CheckInChitPrinterID>.'

5. Type **True** as the value for '<EnableCheckInChitPrinting>' to print the check-in summary chit upon check-in or type **False** if you do not want to print the chit.
6. Type the **search filters**, separated by a semi-colon, to make available when searching for an order, as the values for '<CheckInScreenSearchOptions>.' Available search filters include, AtoOrderId, Referenceld, PhoneNumber, and Any, with 'Any' being a string search across all other filters and the button appears as 'Search.'
7. Type the **maximum number of orders** to appear on the screen when you perform a search, as a parameter for '<CheckInScreenMaxResults>.
8. Type the amount of **detail**, separated by a semi-colon, that appears for each order as the values for '<CheckInScreenDisplayData>.' Available options include OrderName, Referenceld, OrderNotes, DisplayContactPhoneNumber, DisplayTotal, Subtotal, and Tax.
9. Type **True** as the value for '<AllowCheckInClosedOrders>' to return only tendered and closed checks or type **False** to return only open checks.
10. Type **True** or **False** as the value for '<PreventCheckInOutsideReleaseWindow>.' If set to False, only orders that released within the defined release window appear in the search result.
11. Save **AlohaTakeoutOverride.xml**.
12. Restart the **ATO application** and **service**.

Performing manual check-ins from the Aloha POS system

You can check in an ATO order using a button on the Floorplan panel, Order Entry panel, or Close screen panel in Aloha Table Service, or a regular panel in Aloha Quick Service. Normally, these panels require you to have a check opened and displayed; however, checking in an ATO order does not affect or disrupt your current order.

Order check-in custom activity accesses the ATO application in the background without displaying the ATO user interface. Once initiated, you can search for the ATO order either by order number, reference number, phone number, or using a global search string.

To manually check in an ATO order from the Aloha POS system:

1. When a consumer arrives at the restaurant and notifies you they are present, locate and touch the **Check In** button configured to interact with ATO. The Guest Check-In screen appears.

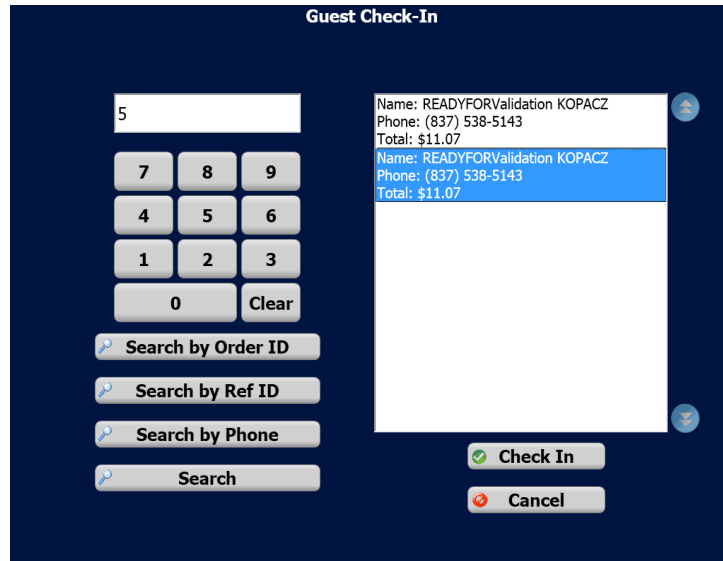

Figure 3 FOH Guest Check-In Screen

2. Enter text in the search box and perform a search for the order using one of the following available options:
Touch **Search by Order ID** to search by order number.
Touch **Search by Ref ID** to search by reference number. The reference ID is an alternate order number generated by the Aloha Online Ordering product.
Touch **Search by Phone** to search by the phone number associated with the ATO guest record.
Touch **Search** to search across all available text strings associated with the order and guest. Be aware, this list may return many entries.
3. If the search returns more than one result, touch the appropriate **order** in the list. If the search returns only one result, proceed to the **next step**.
4. Touch **Check In** to check in the guest or touch **Cancel** to cancel the operation.

Preventing an ATO check-in outside of release window

Released Version	Tracking Number	Products	Audience
ATO v19.1.4	ALOHAP-12607	Aloha Takeout, Aloha Quick Service, Aloha Table Service	Configuration Technician End User

With the 'Enable order release window restriction' option, you can configure a start and end time of day during which the system can release an order to the kitchen. For example, if your store opens from 9:00 a.m. to 11:00 p.m., you can restrict the system to only send orders to the kitchen during those hours. This prevents sending orders to the kitchen before or after business hours when kitchen staff is not present. When selected, you define the start and end time during which you want the system to release orders to the kitchen.

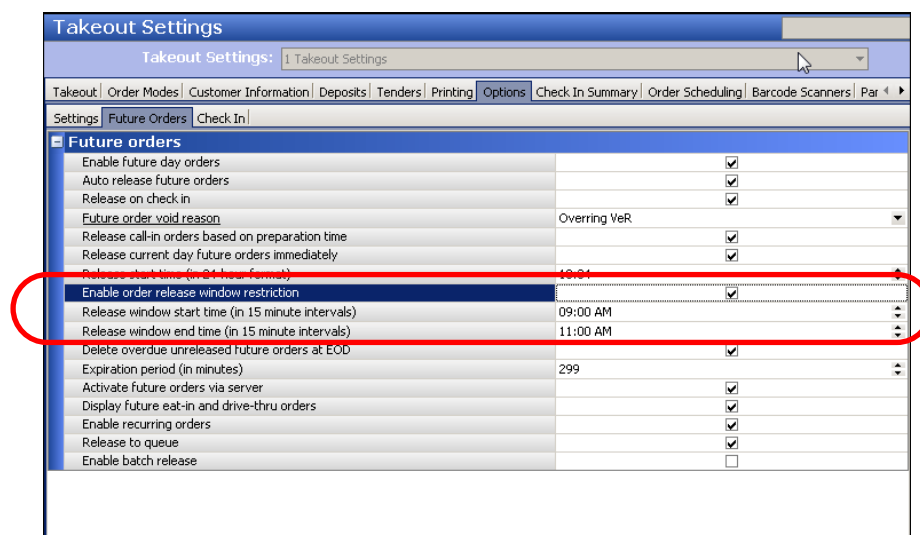

Figure 4 Preventing an ATO Check-in Outside of Release Window

Effective in Aloha Takeout v19.1.4, this configuration also prevents an ATO check-in from occurring outside of the release window. For example, if you configure the system to automatically check in an order using a beacon, and a vehicle arrives in the drive-thru after the release window, the arrival will not trigger a check-in. If you configure the system for a manual check-in, an employee cannot accidentally check in an order after the release window.

Enable order release window restriction — Restricts the time frame when the system can release an order to the kitchen. This prevents the sending of orders to the kitchen before or after business hours when the kitchen staff is not present. For example, if the customer submits a web order to a site at 1:00 a.m., with a promise time of 5:00 p.m. the same day, Aloha Takeout sees this as a same day future order. If you also select 'Release current day future orders immediately,' the order fires to the kitchen immediately at 1:00 a.m. Subsequently, if the End-of-Day runs at 3:00 a.m., the order then closes to cash. When selected, other options appear.

Release window start time (in 15 minute intervals) — Designates the time you want the system to begin releasing orders to the kitchen. **Required Options:** You must select 'Enable order release window restriction' to enable this option.

Release window end time (in 15 minute intervals) — Designates the time you want the system to stop releasing orders to the kitchen. **Required Options:** You must select 'Enable order release window restriction' to enable this option.

Adding VAT disclaimer to non-sales receipts

Released Version	Tracking Number	Products	Audience
ATO v19.1.9	ALOHAP-13490	Aloha Takeout, Aloha Quick Service, Aloha Table Service	Configuration Technician End User

Value Added Tax (VAT) is used in some regions in place of a 'sales' tax.' Each entity in the sales chain pays a VAT. Much like sales tax, if you have proper documentation, you may reclaim the portion of the VAT charged to you by your VAT registered suppliers. To reclaim the VAT on the purchases you acquired for your business you must have a valid VAT receipt (or VAT invoice) as proof of the purchase, and as proof that you paid the VAT on that purchase. If you do not have a valid VAT receipt, you cannot reclaim the portion of the VAT you paid that was already paid by your supplier.

Each VAT registered supplier provides you with a VAT receipt showing details of the sale, including the sale date, the supplier's VAT registration number, and the amount paid for the goods or services. Most importantly, it shows the amount of VAT the supplier charged to you, if applicable. A VAT receipt can be in either paper or electronic format.

A new option in the configuration management tool (Aloha Configuration Center or Aloha Manager) allows you to print a disclaimer on all non-sales receipts, indicating they are 'NOT A VALID VAT RECEIPT.' The default value for this option is False. For locations that require VAT, you must change the value of this option to True.

Note: This text does not appear on non-sales receipts printed from the Aloha POS system.

To enable printing the Non-VAT receipt warning:

1. With Aloha Takeout selected in the product panel, select **Maintenance > Takeout Configuration > Settings**.
2. Select the **Printing** tab.

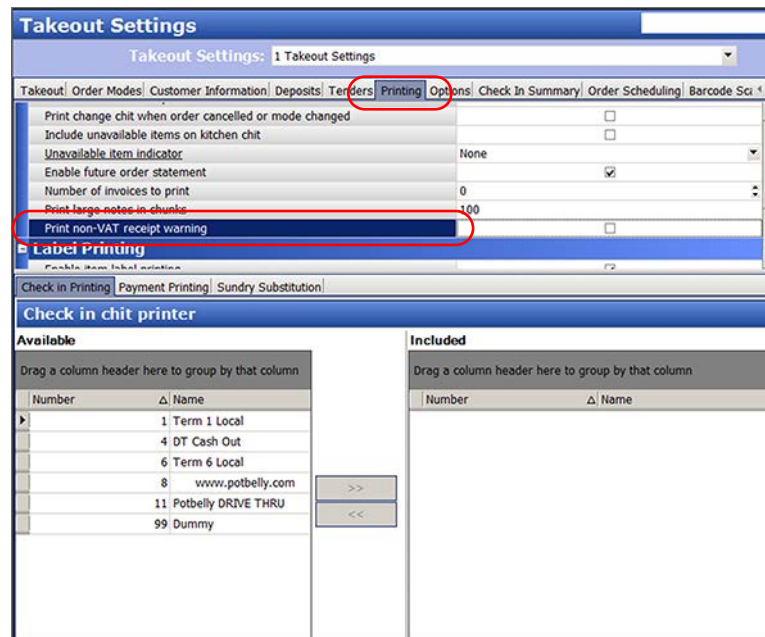

Figure 5 Print Non-VAT Receipt Warning

3. Under the 'Printing' group bar, select **Print non-VAT receipt warning**. The default text appears on the bottom of the chit subject to any text restrictions already defined, such as line length.

Print non-VAT receipt warning — Allows you to print a 'NOT A VALID VAT RECEIPT' disclaimer on all non-sales receipts.

4. Click **Save** and **Close** to exit the **Takeout Settings** function.

Note: Change the verbiage or the language of the default warning message using the Translation Editor utility, if necessary. The text you choose must not exceed the allowed line length.

To change the default text for this option:

1. Use File Explorer to browse to **Bootdrv > AlohaTakeout > Utilities > TranslationEditor > Bin** and double-click **TranslationEditor.exe**.
2. Select the **language** for your location. In this example, the language is en-US.

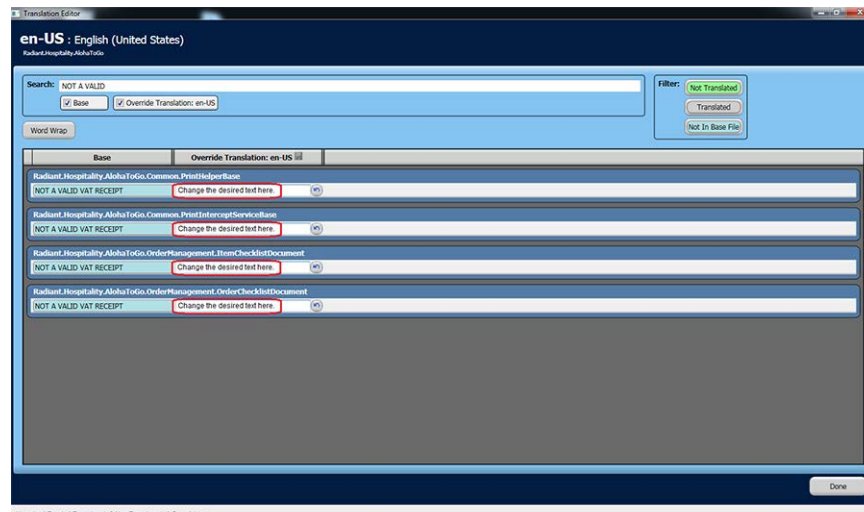

Figure 6 Translation Editor Utility

3. In the search box, type '**NOT A VALID**' to locate the option in each of these sections:
 - Radiant.Hospitality.AlohaToGo.Common.PrintHelperBase
 - Radiant.Hospitality.AlohaToGo.Common.PrintInterceptServiceBase
 - Radiant.Hospitality.AlohaToGo.OrderManagement.ItemChecklistDocument
 - Radiant.Hospitality.AlohaToGo.OrderManagement.OrderChecklistDocument
4. You must type the **desired** text change in the second column of the option for each section listed.
5. Click **Done** and exit the **Translation Editor Utility**.

Using order modes to automatically close a check when payment received

Released Version	Tracking Number	Products	Audience
ATO v19.2	ALOHAP-14029	Aloha Takeout, Aloha Quick Service, Aloha Table Service	Configuration Technician End User

Aloha Takeout provides a global setting that allows the system to close checks automatically after applying payment. This ensures that online orders placed for dine-in or carry-out close seamlessly without building up the order queue on the FOH terminals; however, online orders placed for drive-thru pickup were also closing automatically, losing their place in the drive-thru order queue.

This enhancement allows you to override the global setting, by order mode. For example, to prevent orders placed online for drive-thru pickup from automatically closing upon payment receipt, a new option allows you to specify that an order mode, such as the Drive-Thru order mode, can receive payment without automatically closing the check. This allows the order to remain in the correct position in the drive-thru queue. When the guest arrives at the pick-up window, you then press Close on the FOH terminal, to close the order.

Upgrade Path 	Upon upgrade, if the global option 'Close checks on apply payment' located on the Options tab under the 'Settings' group bar is selected, the system automatically selects the option of the same name located on the Order Modes tab. You must access each order mode for which you want to disable auto-close and clear this option.
--	--

To configure an order mode to prevent automatically closing the check upon payment receipt:

1. With Aloha Takeout selected in the product panel, navigate to **Maintenance > Takeout Configuration > Takeout Settings**, and select the **Order Modes** tab.

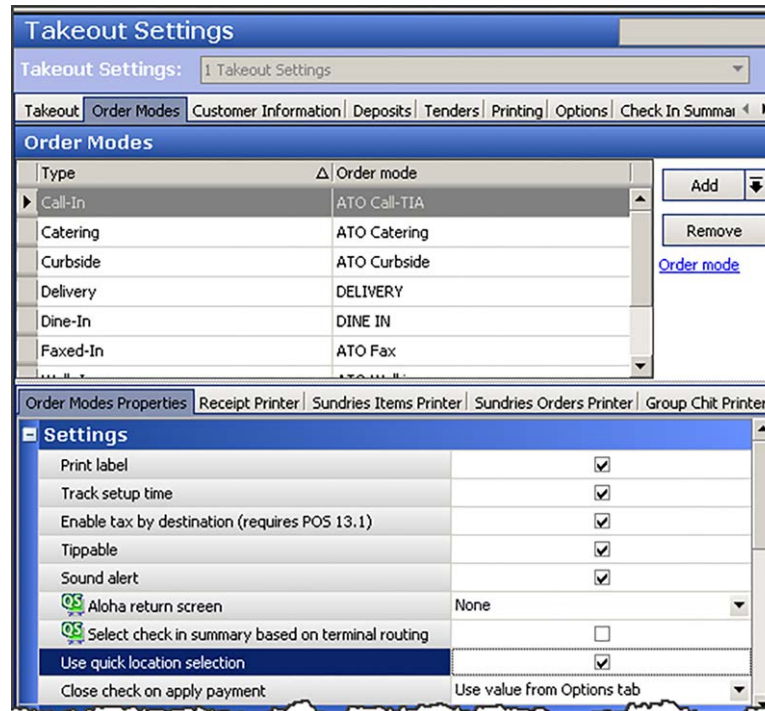

Figure 7 Aloha Takeout Settings, Order Modes Tab

2. Under the 'Order Modes' group bar, select or create the **order mode** for which to disable automatic check close on payment.
3. Under the 'Settings' group bar, select or clear **Use quick location selection** based on your operational needs.

Use quick location selection — Navigates directly to the check-in lane selection screen after a consumer enters their order number to check in, reducing the number of screen touches required to complete the order. When cleared, you can only select a check-in lane by touching the Lane button on the Order Confirmation screen after a consumer checks in. **Related Requirements:** Access Maintenance > Takeout Configuration > Check-In Locations to define the check-in lanes that appear for selection.

4. Clear **Close check on apply payment**.

Close check on apply payment — Automatically closes the check to the logged in employee when 'Apply Payment' is touched on the ATO FOH Pick Up or Dispatch screens. Clear this option if other employees, such as managers, apply payments to ATO orders, but allow other employees to close the

check, or for order modes for which the order needs to remain in the queue. Options include: 'Use value from Options tab,' 'True,' and 'False.' **Required Options:** This option overrides the global option 'Close checks on apply payment' located on the Options tab under the 'Settings' group bar.

Supporting lane locations

Released Version	Tracking Number	Products	Audience
ATO v19.1.4	ALOHAP-15720	Aloha Takeout, Aloha Quick Service, Aloha Table Service	Configuration Technician End User

ATO allows you to configure lanes to represent a designated spot or area at the restaurant used to specify such things as where a vehicle drives up for the guest to enter their order, or where the guest receives their order for pickup. Lanes are ideal for a multi-lane drive-thru environment or a carhop concept so the restaurant staff can easily identify where to bring the consumer order.

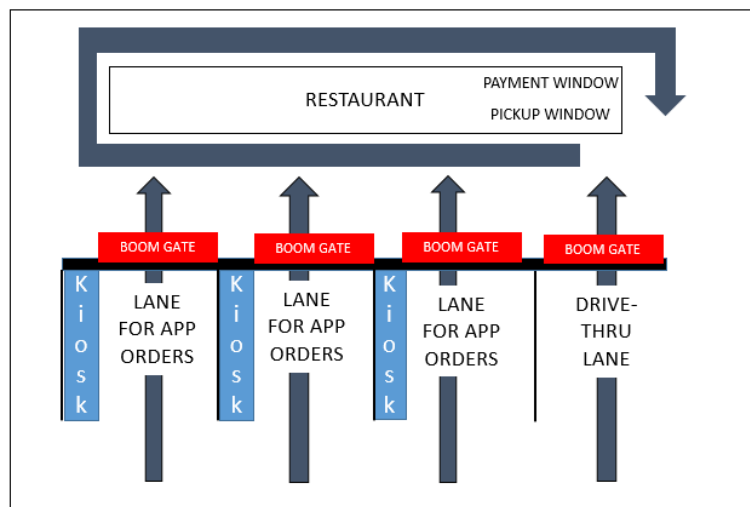

Figure 8 Multi-Lane Drive-Thru Concept

Reference: Refer to the Multi-Lane Drive-Thru Feature Focus Guide for more information about using lane locations to support the environment depicted in Figure 8. Please contact your NCR Voyix account representative for more information regarding carhop concept.

Configuring Aloha Takeout to use BSL

Released Version	Tracking Number	Products	Audience
ATO v19.1.4	ALOHAP-9094	Aloha Takeout, Aloha Quick Service, Aloha Table Service	Configuration Technician, End User

The Business Service Layer (BSL) is cloud-based technology that provides a truly seamless guest experience for on-demand consumers, allowing them to access and interact with an authorized NCR Voyix partner using their mobile phone, a tablet, a desktop computer, a laptop, and more.

In addition to the order services configurations introduced in ATO v17.1, effective in ATO v19.1.4, you can configure ATO delivery service options to use and take advantage of BSL to integrate cook times, delivery times and fees, driver management functions, and more. This allows you to provide a more accurate and dynamic experience for your delivery customers.

 **Reference:** Refer to the Aloha Takeout and BSL Integration Guide for complete information.

The following enhancements streamline communication with ATO using BSL.

Tracking Number	Enhancement
ALOHAP-19913	Send full or estimated price with time quote
ALOHAP-12203	Enhance ATO to use Driver API with BSL

Requiring source and destination record for Online Ordering injection

Released Version	Tracking Number	Products	Audience
ATO v19.x	ALOHAP-30603	Aloha Takeout, Aloha Quick Service, Aloha Table Service, Digital Ordering, Aloha Online Ordering	Configuration Technician, End User

As of ATO v19.x, you must define a Source and Destination record to address all order sources leveraged by an online ordering solution, such as a store website and a delivery marketplace. This enables the online ordering solution to inject orders into ATO. If this record does not exist, order injection uses default values.

Reference: Refer to the Digital Ordering and Aloha Takeout Integration Guide - HKS1516 and the Source and Destination Feature Focus Guide - HKS380 for more information.
