Preface

The purpose of this document is to outline the current state of the devices supported by the Voyix Connect (formerly Connected Payments) gateway. This will be a living document that will be updated as support changes.

The matrices in this document are intended to assist with understanding the various devices and configurations that have completed host/processor certification with Voyix Connect. Use this document to determine the device that supports your merchant's needs.

- Check with your POS provider for device certification and support. **Not all devices and features are supported by all Voyix Connect POS integrators.**
- Reference the legend for the meaning of each of the symbols referenced in the matrices.
- More information on payments hardware end of sale and end of support can be found [here](#).
- For assistance with hardware support, reach out to ConnectedPayments.Support@ncrvoyix.com.
- For any other payments device or host/processor certification related questions, please e-mail: payments.prodmgmt@ncrvoyix.com.

Core Device Feature Set

The Core Device Feature Set is a high-level view of common configurations offered. Please refer to each device for more information.
